## **DETAILED ACTION**

### ***Election/Restrictions***

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-7, drawn to a primer set comprising at least two primers.

Group II, claim(s) 8-51, 64-75, drawn to a method of amplifying a target nucleic acid.

Group III, claim(s) 52-63, 76-83, drawn to a kit comprising a substance with mismatch recognition ability and a primer set for amplification.

The inventions listed as Groups I-III do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: The groups are not linked by a special technical feature which distinguishes over the art. The broadest product, the kit of Group III, is taught by Nollau et al. (Clinical Chemistry, 1997, 43(7):1114-1128). Nollau teaches allele specific amplification wherein a pair of primers is designed, one which is complementary to the wild-type sequence and another which is complementary to the mutation or polymorphism. One of the primers will form a mismatch in the presence of either wild-type or mutant and only one allele of either the wild-type or mutant is amplified (p. 1123, col. 1-2, referred to in the art as either Amplification Refractory Mutation System (ARMS) or PCR amplification of specific alleles (PASA)). Further, it is noted that the primer set meets the limitation of "a substance

having mismatch recognition ability". However, in addition, Nollau teaches the use of proteins for the specific recognition of mismatch, including either mismatch detection through MutS binding or through the action of the Cleavase enzyme (p. 1118, col. 1-2). Therefore, in view of the teachings of Nollau, the claims are not linked by a special technical feature that distinguishes over the art.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

The examiner has required restriction between product and process claims. Where applicant elects claims directed to the product, and the product claims are subsequently found allowable, withdrawn process claims that depend from or otherwise require all the limitations of the allowable product claim will be considered for rejoinder. All claims directed to a nonelected process invention must require all the limitations of an allowable product claim for that process invention to be rejoined.

In the event of rejoinder, the requirement for restriction between the product claims and the rejoined process claims will be withdrawn, and the rejoined process claims will be fully examined for patentability in accordance with 37 CFR 1.104. Thus, to be allowable, the rejoined claims must meet all criteria for patentability including the requirements of 35 U.S.C. 101, 102, 103 and 112. Until all claims to the elected product are found allowable, an otherwise proper restriction requirement between product claims and process claims may be maintained.

Withdrawn process claims that are not commensurate in scope with an allowable product claim will not be rejoined. See MPEP § 821.04(b). Additionally, in order to retain the right to rejoiner in accordance with the above policy, applicant is advised that the process claims should be amended during prosecution to require the limitations of the product claims. **Failure to do so may result in a loss of the right to rejoiner.** Further, note that the prohibition against double patenting rejections of 35 U.S.C. 121 does not apply where the restriction requirement is withdrawn by the examiner before the patent issues. See MPEP § 804.01.
